MEDIA RELEASE

DATE: May 1, 2009

CONTACT: Michael Boschitsch, CGA, mboschitsch@environmentalbiotech.ca

Environmental Biotech Canada Inc. offers a significant weapon in the battle against H1N1 A Influenza (formerly Swine Flu.) **B-Sanitized**, is a total release, disinfectant fogger that disinfects all surfaces in a room within minutes through the release of a fine disinfectant mist.

“Offices, schools, day cares, clinics, hospitals and practically every enclosed work place are a hub for the transmission of germs and infection, often by people who do not even know they are sick yet” says **Environmental Biotech Canada Inc.’s** CEO, Michael Boschitsch. “Cleaning surfaces and washing hands often are very important measures to prevent contagion,” he explains. “Employers have a responsibility and vested interest to protect their people, and while education and awareness are a step in the right direction, actions speak louder than words.”

Cleaning every surface in a room conventionally is difficult and time consuming. **B-Sanitized** is an **EPA registered** solution that can **disinfect an entire room in minutes**. Simply pop the cap at the end of the day and place the pressurized canister in the middle of the room to be disinfected. The total release fogger distributes the environmentally responsible disinfectant throughout the room, effectively sanitizing all exposed surfaces including the walls, desks, ceiling, **even the air** within 15 minutes.

B-Sanitized is **EPA certified effective** against Influenza A viruses including **H1N1 A Influenza (formerly Swine Flu)**. **B-Sanitized** is also effective against HIV, herpes, tuberculosis, bird flu, mould, mildew, athlete’s foot and more.

Environmental Biotech Canada Inc. is a North Vancouver based company specializing in environmentally responsible solutions for drain, grease and odour management, as well as other aspects of our daily environment.
